## FOREWORD

The Committee on International Exchange of Persons is pleased to publish this list of visiting scholars who are recipients of grants under the provisions of the Mutual Educational and Cultural Exchange Act (the Fulbright-Hays Act) for lecturing or advanced research in the United States during the academic year 1966-67. It includes scholars from more than forty foreign countries who are representative of a wide range of academic disciplines.

The awards of the majority of these scholars consist of travel grants which supplement stipends provided by their host institutions in the United States. However, a limited number of scholars receive full United States Government awards which cover all of their expenses including international travel.

This list is prepared annually for the use of the visiting scholars themselves, as well as for interested American scholars, educational institutions, and professional organizations. It is arranged by academic fields and indicates the institutional affiliation of each scholar, the duration of his visit, and the major research or lecturing project on which he will be engaged during his stay in the United States. Most of the visiting scholars arrive in the United States at the beginning of the academic year and remain for one year. However, many extend their stay for a second or, in exceptional circumstances, a third year; and a number receive awards for only brief visits of a few months. The addendum at the end of each section includes the names of scholars whose applications had not been received or the extension of whose stay had not been approved at the time the list was being compiled. Following each section there is a separate listing of scholars who received awards for brief periods under the 1966-67 program, but who will have returned to their home countries by the end of October 1966. For convenience in identifying scholars from various geographic areas, a listing according to home countries has also been added after the field listings.

The titles and home institutions of the majority of the scholars have been translated wherever this seemed appropriate. The field designation has been based on the primary lecturing or research subject as indicated in each scholar's application. It should be noted, however, that most of the visiting scholars have educational interests and experience extending beyond their specialized fields, and many would welcome the opportunity to visit institutions other than those serving as their official hosts in order to become better acquainted with educational practices in the United States and to meet with their American colleagues.

Communications may be addressed to the scholars in care of the graduate or professional schools of the universities with which they are affiliated, or in care of the Committee on International Exchange of Persons.

A selective list of visiting scholars who have indicated an interest in giving occasional lectures is also available and may be secured from the Committee.
