SHARP AQUOS MONITOR

POWERING ON THE MONITOR

1. Press the **POWER** Button (1)

Status	Status of the monitor
Green lit	Power on
Orange lit	Power off (Standby mode)
Orange flashing	Power off (Whiteboard standby mode)
Green flashing	Input signal waiting mode

2. The monitor should begin to boot and the **WHITEBOARD** should appear.

POWERING THE MONITOR OFF

The power can be turned off in the following ways.

1. **Press the POWER button.**
The monitor enters whiteboard standby mode. This method allows faster startup and shutdown than the method below, however, more power is consumed.
2. **Hold down the POWER button until the exit screen appears.**
The monitor enters standby mode. The **WHITEBOARD** is in the shutdown state. More time is required for shutdown and startup than the method above, however, less power is consumed.

DELL COMPUTER

POWERING ON THE PC

The Dell computer is mounted behind the Sharp monitor, in the upper left corner.

Before powering up the PC, make sure that the Sharp monitor is powered on and working.

1. Press the **POWER** button on the PC.
2. Allow time for the PC to boot up. This should take up to 1-2 minutes.
3. Press the **TOUCH MENU** button (3) on the monitor and select "**DisplayPort PC1**".

When the Windows screen displays, you may swipe up on the touch monitor, or click the wireless mouse, or press a key on the wireless keyboard (once they are turned on). This will take you to the logon screen.

POWERING THE COMPUTER OFF

1. From the Windows desktop, click the  Windows start button.
2. Select the  Power button.
3. Then select **Shutdown** or **Sleep**, depending on your needs.
