

USING THE CRESTRON AIR MEDIA TO DISPLAY YOUR COMPUTER SCREEN ON THE MONITOR

ACCESSING THE AIRMEDIA DEVICE FROM A MAC OR PC

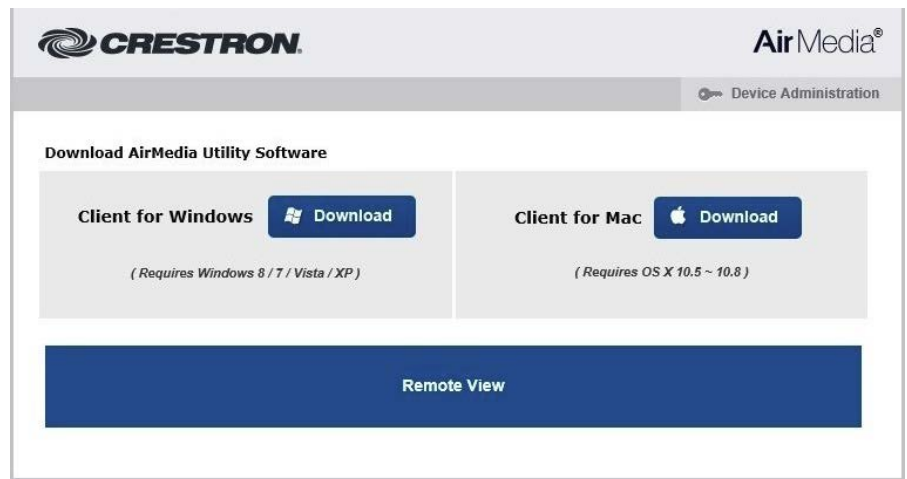

To access the guest application from the AirMedia Welcome window, you must first change the monitor input to accept the AirMedia display. Follow the steps below:

1. You will need to switch the input port for the monitor to the AirMedia device, which resides on the "HDMI1 Component" port.

Once you've done that, the AirMedia device should display the welcome screen.

2. Open a web browser and enter the IP address or hostname displayed at the top of the welcome screen (in this example enter 192.168.0.194) into the browser. The AirMedia Guest Download window opens.

3. Click Download for Client for Windows or Client for Mac®.
 - A small application is downloaded; the user runs the application.
 - If prompted, enter the login code found at the upper right of the AirMedia screen (in this example 6591).

The session begins. The user's desktop is shown on the on-screen display.
