Checked off on Data Flow Mapping

Get to the bottom of serials + icode1=365 strategy
Further discussion : Beth -I'm marking this done as we agreed in the Storage
Chairs this morning that there is no need to try to make items 365 or
not. Stay tuned to the Data Flows channel for how these are going to be
updated via the regular monographs "flow." Thanks so much for your
thoughts and brilliant mind, Mandi!

Explore methods to mitigate dual linked item records : remediate or accept bad data?
Further discussion: The decision, together with Mandi, is to sort each metadata
export, move the multi-linked items to the end of the file and append to
a file so that the records can later be cleaned up manually / by sorting.
Haven't quite settled on the naming conventions for these "append" or
Multibib files.

Test updating item information in union catalog via file load

Discussion Beth - I was going to test this before leaving town but Laura B, doesn't quite
have the fields we need available to me in the ACC/ IAT file formats, yet. specifically we
are missing (former) item status, icode1, and bib level (m or s which we may not need).

Discussion Beth - I created a new export from the Sierra create list #13 to overlay the 37 "naked" barcodes in Homer. The fields in the IAT file IATSierra are not quite right but close enough for testing. The saved export I am currently using is CaiaIATversion2 . 1. This list of 37 has 1 item attached to 2 bib...

Sierra Holds Integration

2nd test from Dylan's Sierra SQL to Caia API > 100% successful!

Beth - Just pasting the SQL query here: SELECT hold.id, hold.placed_gmt, item_view.barcode, item_view.location_code, item_view.copy_num, iv.field_content as "volume", item_record_property.call_number_norm, bib_record_property.best_title, hold.pickup_location_code /*commented ou... (more on page)

This query can be fired any time by reloading the page at <https://libraries.uark.edu/apis/caia/pull-list.php>

The file layout is configured at Caia > Administration > File Layouts > ERQ External Retrieval Requests > Sierra Requests > file start with Holds.
